

**FEDERAL CLIMATE COMPLEX  
DATA DOCUMENTATION  
FOR  
INTEGRATED SURFACE DATA  
(ISD)**

**January 12, 2018**

NOAA - National Centers for Environmental Information  
US Air Force - 14<sup>th</sup> Weather Squadron  
151 Patton Avenue  
Asheville, NC 28801-5001 USA

**Important notice:** In order to accommodate a growing number of stations in the Integrated Surface Data (ISD), a new methodology for the assignment of station identifiers is being implemented by approximately January 2013. Station identifiers which currently appear as an 11-digit numerical field in positions 5 - 15 of each ISD record in the archive format described in this document will soon include stations that contain an alphabetic character (A-Z) for the leading digit (position 5). These assignments will not affect existing stations unless it becomes necessary to reassign new identifiers to them. This is occasionally necessary due to station moves or various other reasons. It will affect most new stations coming into existence after this implementation occurs. At some point in the future, NCEI will be moving toward a longer station identifier for ISD. This will extend the current record layout of the data files and influence all existing station identifiers which will be reassigned. NCEI will provide further information on these pending changes as the details are established. You may also keep abreast of these or other changes by referring to the most recent edition of the ISD documentation.

1. **Data Set ID:**

DS3505

2. **Data Set Name:**

INTEGRATED SURFACE DATA (ISD)

3. **Data Set Aliases:**

N/A

4. **Access Method and Sort for Archived Data:**

The data files are derived from surface observational data, and are stored in ASCII character format. Data field definitions for elements transmitted are provided after this preface, providing definition of data fields, position number for mandatory data fields, field lengths for variable data fields, minimum/maximum values of transmitted data, and values for missing data fields. Data are accessible via NCEI's Climate Data Online system ([cdo.NCEI.noaa.gov](http://cdo.NCEI.noaa.gov)), FTP (<ftp://ftp.NCEI.noaa.gov/pub/data/noaa/>), GIS services ([gis.NCEI.noaa.gov](http://gis.NCEI.noaa.gov)), and by calling NCEI for off-line servicing (see section 12 below).

**Data Sequence** - Data will be sequenced using the following data item order:

1. FIXED-WEATHER-STATION identifier
2. GEOPHYSICAL-POINT-OBSERVATION date
3. GEOPHYSICAL-POINT-OBSERVATION time
4. GEOPHYSICAL-POINT-OBSERVATION latitude coordinates
5. GEOPHYSICAL-POINT-OBSERVATION longitude coordinates
6. GEOPHYSICAL-POINT-OBSERVATION type surface report code

## 7. GEOPHYSICAL-REPORT-TYPE code

**Record Structure** - Each record is of variable length and is comprised of a control and mandatory data section and may also contain additional, remarks, and element quality data sections.

**Maximum record size:** 2,844 characters

**Maximum block length:** 8,192 characters for data provided on tape

**Control Data Section** - The beginning of each record provides information about the report including date, time, and station location information. Data fields will be in positions identified in the applicable data definition. control data section is fixed length and is 60 characters long.

**Mandatory Data Section** - The mandatory data section contains meteorological information on the basic elements such as winds, visibility, and temperature. These are the most commonly reported parameters and are available most of the time. The mandatory data section is fixed length and is 45 characters long.

**Additional Data Section** - Variable length data are provided after the mandatory data. These additional data contain information of significance and/or which are received with varying degrees of frequency. Identifiers are used to note when data are present in the record. If all data fields in a group are missing, the entire group is usually not reported. If no groups are reported the section will be omitted. The additional data section is variable in length with a minimum of 0 characters and a maximum of 637 (634 characters plus a 3 character section identifier) characters.

Note: Specific information (where applicable) pertaining to each variable group of data elements is provided in the data item definition.

**Remarks Data** - The numeric and character (plain language) remarks are provided if they exist. The data will vary in length and are identified in the applicable data definition. The remarks section has a maximum length of 515 (512 characters plus a 3 character section identifier) characters.

**Element Quality Data Section** - The element quality data section contains information on data that have been determined erroneous or suspect during quality control procedures. Also, some of the original data source codes and flags are stored here. This section is variable in length and contains 16 characters for each erroneous or suspect parameter. The section has a minimum length of 0 characters and a maximum length of 1587 (1584 plus a 3 character section identifier) characters.

**Missing Values** - Missing values for any non-signed item are filled (i.e., 999). Missing values for any signed item are positive filled (i.e., +99999).

**Longitude and Latitude Coordinates** - Longitudes will be reported with negative values representing longitudes west of 0 degrees, and latitudes will be negative south of the equator. Although the data field allows for values to a thousandth of a degree, the values are often only computed to the hundredth of a degree with a 0 entered in the thousandth position.

5.    **Access Method and Sort for Supplied Data:** See #4 above.
6.    **Element Names and Definitions:** See documentation below.

15. **Known Uncorrected Problems:**

Minimal number of random errors, decode errors, and reporting errors (by station)--less than .1% of observations affected overall. Most errors corrected/eliminated by quality control software.

16. **Quality Statement:**

Data have undergone extensive automated quality control, and additional manual quality control for US Air Force stations, US Navy stations, and US National Weather Service stations.

17. **Revision Date:** N/A

18. **Source Data Sets:**

AFCCC USAF SURFACE HOURLY Surface Hourly, NCEI DS3280 Surface Hourly, NCEI DS3240 Hourly Precipitation. AFCCC USAF SURFACE HOURLY includes over 100 source datasets, while NCEI DS3280 includes several original input sources; so over 100 original input sources are included in the current ISD archive. Beginning in 2006, additional data sources are being added, and will be documented here as they become available online.

22. **Summary:**

The Integrated Surface Data (ISD) is composed of worldwide surface weather observations from over 20,000 stations, collected and stored from sources such as the Automated Weather Network (AWN), the Global Telecommunications System (GTS), the Automated Surface Observing System (ASOS), and data keyed from paper forms. Most digital observations are decoded either at operational centers and forwarded to the Federal Climate Complex (FCC) in Asheville, NC, or decoded at the FCC. NOAA's National Centers for Environmental Information (NCEI) and the US Air Force's 14<sup>th</sup> Weather Squadron (14WS) make up the FCC in Asheville, NC. Each agency is responsible for data ingest, quality control, and customer support for surface climatological data. All data are now stored in a single ASCII format. The dataset is used in climatological applications by numerous DOD and civilian customers.

ISD (formerly known as ISH) refers to the digital dataset and format in which hourly, synoptic (3-hourly), daily, monthly, and various other weather/climate observations are stored. The format conforms to Federal Information Processing Standards (FIPS). The dataset includes data originating from various codes such as synoptic, airways, METAR (Meteorological Routine Weather Report), and SMARS (Supplementary Marine Reporting Station), as well as observations from automatic weather stations. The data are sorted by station, year-month-day-hour-minute, report type, and data source flag. This document provides complete documentation for the dataset and its format.
